Inorganic flocculant

How to use TREAT®

Example: water from a pond or river.

Usage amount: Use 1g of [TREAT] for 10L of raw water.

Step1. Pour 10L of target water into the bucket.

Step2. Stir to even out the water stains.

Step3. Add 1g of TREAT as powder and mix a little faster.

Step4. If any dirt clumps appear in the water, slowly stir them. If it does not appear, repeat from step 3.

Step5. If the clumps start to get big, stop stirring.

Step6. Wait for the lumps to settle.

Step7. Please filter it to remove the transparent part.

Caution Note :

This product has no sterilizing effect.

Please sterilize it before use if necessary. (Please sterilize with hypochlorous acid etc. before use.)

The above is an example. The amount to be added varies depending on the water quality, so please check each time.

This product is not a food product. (It's not food.)

Please be sure to read the precautions carefully before using.
